

HOW TO CONVERT A PIE CHART TO DOUGHNUT CHART IN TABLEAU

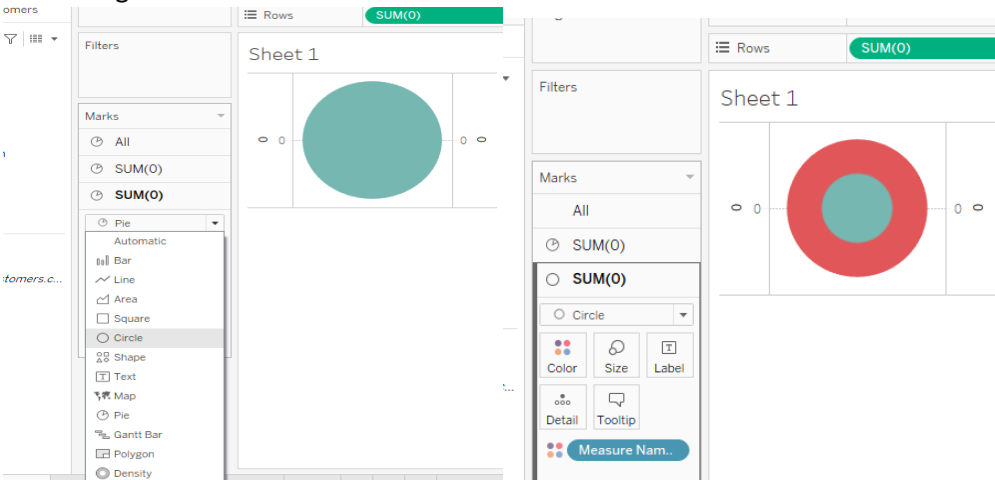

1. Go to rows, right click and select new calculation.
2. Type '0' and click enter, repeat the process again. You should have something like this.

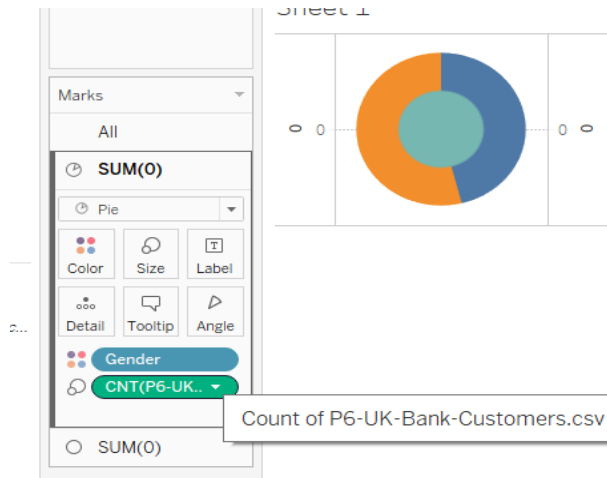

3. Right click on the second sum and select dual axis.

4. In the marks card, select the second sum and change to circle, adjust the size. You should have something like this.

5. Put the dimension (in my case, gender) in the color shelf, and the measure (count of bank customers) in the size shelf, both are to be done on the first sum (pie chart).

6. You can also go ahead and label it, by putting the dimension and measure in the label shelf, still on the first sum.
